

METHODS FOR CONSISTENT FOREWARNING OF CRITICAL EVENTS ACROSS MULTIPLE DATA CHANNELS

Patent number: CA2491987
Publication date: 2004-01-22
Inventor: HIVEY LEE M (US)
Applicant: UT BATTELLE LLC (US)
Classification:
 - international: G06F19/00; G06F19/00; (IPC1-7): G06F19/00.
 - european: G06F19/00A
Application number: CA20032491987 20030701
Priority number(s): US20020195626 20020712; WO2003US20700
 20030701

Abstract of CA2491987

This invention teaches further method improvements to forewarn of critical events via phase-space dissimilarity analysis of data from biomedical equipment, mechanical devices, and other physical processes. One improvement involves conversion of time-serial data into equiprobable symbols. A second improvement is a method to maximize the channel-consistent total-true rate of forewarning from a plurality of data channels over multiple data sets from the same patient or process. This total-true rate requires resolution of the forewarning indications into true positives (TP), true negatives (TN), false positives (FP) and false negatives (FN) relative to a forewarning window 20. A third improvement is the use of various objective functions, as derived from the phase-space dissimilarity measures, to give the best forewarning indication. A fourth improvement uses various search strategies over the phase-space analysis parameters to maximize said objective functions. A fifth improvement shows the usefulness of the method for various biomedical and machine applications.
